7. Travel Booking System

Objective: Create a platform for booking flights, accommodations, and travel packages.

Tasks:

- Develop entities for flights, hotels, and user profiles to manage travel-related data.
- Implement search and filtering features to enhance user experience.
- Create functionalities for booking, payment processing, and itinerary management.

Skills Developed: Integration with payment gateways, crafting complex queries, and user experience design.

8. Social Networking Site

Objective: Build a basic social media platform where users can create profiles, post updates, and interact.

Tasks:

- Define entities for users, posts, and comments

to structure social interactions.

- Implement features for following other users, liking posts, and sharing content.
- Develop a notification system for user activities and updates.

Skills Developed: Relationship management, real-time data processing, and user interface design.

Students can learn Deep Learning at our [**Deep Learning Training in Chennai**](#).

9. Job Portal

Objective: Create a platform connecting job seekers with employers effectively.

Tasks:

- Define entities for jobs, applications, and user profiles to manage the job lifecycle.
- Implement features for job listings, application submissions, and employer dashboards.
- Develop a dashboard to track application statuses and user interactions.

Skills Developed: User authentication, query optimization, and effective data presentation.

10. Event Management System

Objective: Design an application for managing events, registrations, and participant engagement.

Tasks:

- Create entities for events, participants, and venues.
- Implement features for event creation, participant registration, and ticket sales.
- Develop email notifications for event updates and reminders.

Skills Developed: Email integration, session management, and event handling techniques.

Students can also learn Jenkins at our [Jenkins Training in OMR](#).

11. Content Management System

Objective: Build a platform for managing, publishing, and editing content efficiently.

Tasks:

- Define entities for articles, authors, and categories to organize content.
- Implement a rich text editor for creating and formatting articles.
- Develop features for content approval workflows and version control.

Skills Developed: Workflow management, rich text processing, and version control systems.

12. Forum Application

Objective: Create a discussion forum for users to post questions and replies.

Tasks:

- Define entities for threads, posts, and user profiles.
- Implement features for creating threads, replying, and managing discussions.
- Develop moderation tools to manage content and user behavior.

Skills Developed: User engagement techniques, session management, and real-time updates.

Students can learn Salesforce, at our [Salesforce Training in OMR](#).

13. Fitness Tracker Application

Objective: Build a platform for users to track fitness activities, set goals, and monitor their progress.

Tasks:

- Create entities for users, workouts, and progress logs.
- Implement features for goal setting, logging workouts, and tracking metrics.
- Develop analytics to visualize fitness performance over time.

Skills Developed: Data analysis, user interaction design, and report generation.

14. Real Estate Management System

Objective: Develop an application for managing property listings and client inquiries.

Tasks:

- Define entities for properties, agents, and clients to organize real estate data.
- Implement features for property searches, inquiries, and client management.
- Develop dashboards for tracking listings and agent performance.

Skills Developed: Database normalization, user management, and data presentation skills.

Professionals can upgrade their Selenium skills at our [**Selenium Training in OMR**](#).

15. Online Quiz Application

Objective: Create a platform for users to take quizzes and track their scores.

Tasks:

- Define entities for quizzes, questions, and user profiles.
- Implement scoring systems, leaderboards, and quiz creation tools.
- Develop features for sharing quizzes and analyzing results.

Skills Developed: User engagement strategies, data handling, and scoring algorithms.

16. Task Management System

Objective: Build an application for managing tasks and project deadlines.

Tasks:

- Create entities for tasks, projects, and users to organize workflows.
- Implement features for task assignment, deadlines, and status tracking.
- Develop notifications for upcoming deadlines and task updates.

Skills Developed: Project management techniques, notification systems, and data visualization.

Students can remote learn Software Testing, at our [**Software Testing Online Training**](#).

17. Online Learning Platform

Objective: Design a system for delivering online courses and assessments to users.

Tasks:

- Define entities for courses, users, and assessments.
- Implement features for enrollment, progress tracking, and certification.
- Develop assessment tools for quizzes and feedback.

Skills Developed: E-learning methodologies, content delivery strategies, and user assessment techniques.
